

CSc 345 Syllabus

By: Professor Hudson Lynam

Welcome!

- This is the first class meeting for CSc 345... So if you don't recognize that class code and number, you might be in the wrong place!
- We'll be starting assignments quickly:
 - Homework #1 will be assigned this Thursday, and due a week later
 - Program #1 will be assigned on Sept 3rd and due Sept 17th
- This is the only section of 345... So I hope you enjoy it!

Catalog Info

- Class: CSc 345, Analysis of Discrete Mathematics
- Credits: 3
- Meets: 2:00-3:15pm Tuesdays and Thursdays
- Room: The Commons, Rm 305
- Prereqs: CS Advanced Standing, CSc 210, and CSc 244
- Description: Introduction to and analysis of algorithms and characteristics of discrete structures. Course topics include algorithm analysis techniques, recurrence relations, structural induction, hierarchical structures, graphs, hashing, and sorting.
- **Final Exam: 12/14/26, 3:30pm-5:30pm**, same room as meetings

Instructor and TAs

- Instructor: Hudson Lynam, Ph.D., Asst. Professor of Practice
- Grad TAs: Moyeen Uddin and Xuecheng Wang
- UGTAs: Akhond Masud

Information Resources

- Course D2L: <https://d2l.arizona.edu/d2l/home/1811180>
- Course Gradescope: <https://www.gradescope.com/courses/1357089>
- Course website: <https://professorlynam.github.io/csc345/>
- Piazza: <https://piazza.com/arizona/fall2026/csc345001>
- Note that the website is updated frequently! It'll have the assignments posted to it as they are released, along with the lecture slides.
- I'll also have office hours (open door, drop in, my office [GS](#) 823):
Tuesday and Thursday 12:45pm-1:45pm

Noteworthy Dates

- Midterm exam dates:
 - Oct 8th
 - Nov 17th
- Final Exam Dec 14th

Grading for this Course

- Here's a breakdown of the grading for this course:
- There are 4 Homeworks, worth 3.75% each, for a total of 15%
- There are 4 Programs, worth 6% each, for a total of 24%
- There n Quizzes worth 10% total. Your 5 best quizzes count towards this category
- There are 2 Midterms worth 15% each, for a total of 30%.
- The final exam is comprehensive, and worth 16% of your final grade
- Note: what grading category is missing here...?

Attendance/Class Participation

- My expectation is that you attend class and participate. 5% of your grade is **directly** based on Class Attendance.
- **Indirectly... This is a tough course**, students who skip/don't engage with class meetings are **extremely unlikely** to do well
- Note that 56% of your final grade is based on in-class assessments. These assessments are based on the content covered in class. I strongly recommend engaging with the lectures in this course
- Take notes, ask questions, answer questions, etc.

Homeworks and Programs

- Homeworks are due at the start of class one week after being assigned. Question types are mostly problem-solving. I recommend you word-process your answers (no points for illegible answers).
- Programs are due (typically) two weeks after being assigned. We'll be using Java 25. Programs are graded on documentation, coding style, and correct execution
- Homeworks and Programs will be submitted to Gradescope
- Graded by TAs within 1-2 weeks. Regrade requests are accepted for one week after grades are released

Late Work

- For Homeworks and Programs, if you turn it in within 24 hours of the due date, your work is accepted with a deduction of 20%. If you turn it in within 48 hours of the due date, your work is accepted with a deduction of 40%. Past 48 hours the work is not accepted
- **Start your work early** (especially for Programs). If you start a day or two before the due date, you probably won't finish

Quizzes

- I plan to have some number of quizzes, announced with relatively short notice, with the topics covered by the quiz included in the announcement
- You should be studying the material regularly, not just for a quiz/exam
- I'll count only your best 5 quizzes. However, I don't offer make-up quizzes
- Graded by the TAs, regrade requests accepted for a week after grades are released

Midterms

- Midterms cover the material since the previous midterm
- Question types are mostly short-answer and problem-solving
- Both quizzes and midterms are closed book, closed electronics
- I don't give make-up exams (without a Dean's Excuse)... However!
- If 66.67% of the class submits their course evaluation, I'll replace your lowest midterm's score with a copy of your final exam's score (if it helps your grade to do so)
- Graded by myself and the TAs within a week. Regrade requests are accepted for a week after the grades are released... by direct email to me! I regrade the entire exam, not just the parts you question

Final Exam

- Is comprehensive, similar style to midterms, but longer
- I'll review the finals of students near the next-higher letter grade, so regrade requests shouldn't be necessary
- Potentially replaces your lowest midterm grade as noted

Read the Syllabus for more details!

- It has more details, including links to various resources and requirements, the *tentative* class schedule/topics, and more
- Ignorance of the syllabus does not excuse you from its contents
- In particular, it also covers...

Academic Dishonesty

- Essentially, **do your own work!**
- The assignments assessments in this class are individual assignments
- The assignments in this course are meant to help deepen your understanding of the course content... which will then be tested on in-class assessments
- If you're stuck, use the resources available to you to get unstuck. Piazza and office hours are for getting your questions answered
- If you're ever unsure about whether something is allowed, ask!

Questions?

I'll see you Thursday!
